TIME System Tribal License Plate Query Guidance

Queries through WisDOT:

- Results → plate holder information excluding expiration data
- Inquiry by VIN → vehicle & owner information
- Oneida tribal license plates → returns a standard WisDOT response

Tribal license plates require two queries to determine the registration and the stolen status of the vehicle or license plate(s).

To obtain Wisconsin registration information:

- Run a standard Wisconsin vehicle query (0173)

  License Plate: [enter the license plate information]

  Type: [enter the TB (Tribal) or leave blank]

  Year: [enter the appropriate year]

To obtain Out-of-State registration information:

- Run an Out-of-State vehicle query (0170)

  Destination State: [enter the appropriate state]

  License Plate: [enter the license plate information]

  State: [enter the appropriate Tribal Nation code]

  Type: [enter the vehicle type]

  Year: [enter the appropriate year]

- Additional information may be available from each state's help file

To obtain NCIC responses, including stolen vehicles, a separate query (0174 - License Plate Only Query – CIB and NCIC) is required.

For eTIME Browser/S2S MACH, the second query requires a NLETS query using the appropriate region code. If the state is unknown, use "Region code for all states."

Steps for NCIC responses:

  NLETS: [enter the appropriate region code]

  Registration Number: [enter the license plate information]

  Type: [enter the vehicle type]

  Year: [enter the appropriate year]
